All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Only the first 147416 bases of this clone are being submitted. Bases 145417-155040 overlap accession number AC004147 (WICGR project L228). The first 2Kb of the overlapping region are submitted to confirm overlap.

ON NOV 9, 2002 this sequence version replaced gi:23265933.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas sassembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Worley, K.C.

and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold' by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            64

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Estimated insert size: 194000; pulse field gel estimation
Estimated insert size: 176244; sum-of-contige estimation
Quality coverage: 6.92 in Q20 bases; pulse field gel estimation
Quality coverage: 7.62 in Q20 bases; sum-of-contigs estimation.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 48 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* trus of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                      AL SUBMILTERIOR OF COTT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77010, USA

On Sep 14, 2002 this sequence version replaced gi:21737094.

The Sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using described in the feature table below represents a scaffold in the Atlas assembly (a 'contig scaffold'). Within each contig-scaffold, individual sequence contrigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)

* NOTE: This sequence may represent more than one clone.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* This sequence will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Assembly program: Phrap; version 0.990329

ON Nov 15, 2002 this sequence version replaced gi:23267649.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas and thep://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas and individual sequence contigs are ordered and orienced, and separated individual sequence contigs are ordered and orienced, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contigs-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Assembly program: Phrap, version 0.990329

Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer. WPI; 2002-165895/22.

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoatrractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention has cytostatic, and antiarteriosoclarotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A Disclosure; SEQ ID NO 1; 30pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular Ccl2-deficient, Ccr2-deficient and/ or a Ccl2-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lippfuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polynucleotide sequence is the human Ccl2 gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                    Testing candidate drug for treating age-related macular degeneration, by administering drug to Col2-deficient, Cor2-deficient knockout mouse, and analyzing development or regression of drusen and/or lipofuscin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GTCCAAGCAAGAGATGATGAAGGCCTAAATATGGAGCCAAAGAGGCAGCAATGAAGAATG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating (x) for inhibiting the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma or a propensity to carcinoma; (vi) for determining Carcinoma Associated (CA) gene copy number. In addition, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26 AAGGAGAAGGAAGGAGGAAATACCTGGAGGTAGAAATGGTGATGATGTACATC 85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 78268 BP; 20402 A; 18203 C; 18818 G; 20845 T; 0 U; 0 Other;

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is bacterial, fungal or viral infection. The present sequence to a plant to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 TAGAAATGGTGATGATGTGTACATCAAGCAGGAGAAAACCAATGAACCAGATGCGAATT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding hepatocyte growth factor receptor, where the compound specifically hybridises with the nucleic acid molecule encoding hepatocyte growth factor receptor comprising a acid molecule encoding hepatocyte growth factor receptor comprising a sequence of 4586 bp (SEQ ID NO: 4) and inhibits the expression of hepatocyte growth factor receptor in inhibiting the expression of hepatocyte growth factor receptor in cells inhibiting the expression of hepatocyte growth factor receptor or receptor; a diagnostic method for identifying a disease state; a kit or assay device compitaing the compound; and treating an animal having a disease or condition associated with hepatocyte growth factor receptor. The compound and methods are useful in diagnosing and treating hyperproliferative discorder. This sequence represents a human, hepatocyte hyperproliferative discorder. This sequence represents a human, hepatocyte hyperproliferative discorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              287 AGTITCAGGAAATGTAACTTATAGATTTTATACATACACAGAAATACGGACTAGTGGG
                                    The present inventious interacts to mover with any entire present inventious interacts. The sequences are useful for: (i) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for diagnosing evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for reating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochib; (x) for diagnosing carcinoma associated (CA) gene copy number: In addition, the determining Carcinoma Associated (CA) gene copy number: In addition, the carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This parent is an equivalent to basic patent upsached is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     347 AAGCTATTGCCATGGTCCAAGCAAGAGATGATGAAGGCCTAAATATGGAGCCAAAGAGG
The present invention relates to novel DNA and protein sequences which

CC the 58798 Cotton plant cDNA sequences mentioned in the specification.

CC sequences mentioned in the specification and producing a plant having an improved property.

CC comprises transforming a plant with a recombinant construct comprising a promucer region functional in a plant cell operably joined to a promoter region functional in a plant cell operably joined to a promoterty, and growing the transformed plant. The polypetide associated to polymucleotide comprising a coding sequence for a polypeptide associated to plant cells by modification of the cell cycle pathway, improving plant coll tolerance, manipulating growth rate in plant tolerance, providing increased resistance to plant disease, producing galactomannan (or lignin or plant growth regulators), improving plant tolerance to herbicides, increasing the rate of homologous recombination in plants, improving plant tolerance to extreme commoting conditions or to pathogens or pests, improving yield by modification of photosynthesis, modifying seed oil or protein yield by modification of photosynthesis, modification of carbohydrate, introgen corpus, improving yield by modification of photosynthesis, modification of carbohydrate, introgen corpus, improving yield by providing improved plant growth and development under at least one stress condition. The polymucleotide and polypeptide may also be used in recombinant DNA

constructs, in physical arrays of molecules, as plant breeding markers, or in computer-based storage and analysis systems. The present sequence is a Cotton plant cDNA of the invention. NOTE: The sequence data for thi patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence is commat directly from USPTO at sequence.html?Doc1D=20040181810. However only 6585 polymucleotide sequences were available, the remaining 52213 polymucleotides and all 58798 protein sequences were not present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                     The invention relates to nucleic acids comprising a segment of chemically pretreated DNA of adrenergic alpha-IC-receptor gene. The invention also relates to oligonucleotides or peptide nucleic acid (PNA) oligoners useful for detecting cytosine methylations. The pretreated DNA is useful useful for detecting cytosine methylations. The pretreated DNA is useful disorders and cancer, in particular major depressive disorder. Tourette's disorders and cancer, in particular major depressive disorder; Tourette's syndrome, schizophrenia, psychiatric and neurological disorders, smoking, syndrome, schizophrenia, metaricular major depressive disorders, smoking, and schizoaffective patients, and suicidal behaviours in patients with and schizoaffective patients, and suicidal behaviour in patients with schizophrenia. The nucleic acid is useful for detecting the methylation state of all CpG dinucleotides and/or single nucleotide polymorphisms (SNPS). The present sequence is human chemically treated genomic DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ggaaggijgagicaaggaitigaaigiragggigaaaagijactacicaacicigiagg 217

The invention relates to a nucleic acid comprising a sequence at least 18 conservation in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the sequences of the associated with pharmacogenomics according to one of the sequences of the genes ALDIE (NM 000693), CYP11A (NM 000761), CYP11B1 (NM 000497), CYP3A3 (NM 000776 and NM 01990), NM 01990), NM 01990, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900, NM 019900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3258 Aritrggitnégraagrikggranaarratrgritarrákárítárítítráarrákítít 3317

                                                                                                                                                                                                                                                                                                               The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence salected from any of the 600 sequences fully defined in the specification. A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polymptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      27 AGGAGAAGGAAGGTGGGAGCAAATACCTGGAGGTAGAAATGGTGATGTGTACATCA 86

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically finds to the protein, and a blochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protonnocegenes. The CA nucleic acid sequences can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The present sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      86
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27 AGGAGAAGGAAGAGTGGGAGCAAATACCTGGAGGTAGAAATGGTGATGATGTACATCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to new recombinant nucleic acids. The invention also relates to a host cell comprising a recombinant nucleic acid or also relates to a host cell comprising a recombinant nucleic expression vector, an expression vector comprising a recombinant nucleic acid, a recombinant protein, a method of screening for drug candidates, a acid, a recombinant protein, a method of screening for a bioactive agent capable of binding to a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a method of evaluating the effect of a candidate carcinoma drug, a method of diagnosing carcinoma, a method of the activity of a CAP, a method of treating carcinoma, a method of capable of carcinoma or neutralising the effect of a CAP and a method of evaluating the effect of a candidate propensity to carcinoma. A method of evaluating the effect of a candidate carcinoma drug comprises administering the drug to a patient, removing a carcinoma drug comprises administering alterations in the
                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                          86
associated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.

expression or activation of a gene comprising the nucleotide sequence. A method of diagnosing carcinoma comprises determining the expression of method of diagnosing carcinoma comprises determining the expression of the cone or more genes comprising the nucleic acid sequence in a first tissue con or mate genes comprising the expression of the gene from the first individual conformation of the gene from the first individual, where a difference in the expression indicates conformation of the first individual has carcinoma. A method of inhibiting the carcinomas comprises binding an inhibitor to the CAP. Treating a cutivity of a CAP comprises binding an inhibitor of CAP.

C carcinomas comprises administering to a patient an inhibitor of CAP.

C carcinomas comprises administering to a patient an inhibitor of CAP.

C carcinomas comprises an antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acid. The nucleic acid. The nucleic acid. The nucleic acid. The polypoptide and antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acid of the invention. Note: The sequence data associated (CA) nucleic acid of the invention. Note: The sequence data associated (CA) nucleic acid of the invention. Note: The sequence data conformed an electronic format directly from USPTO at the print of the print of the printed specification but was compared to the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care of the printed specification but man care 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        t 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   o;

comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to instract the invention.
                                                                                                                                                                                                                                                               1;

This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to constant obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as cartibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these conditions diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alabeimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintening equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cyfostatic and tranquiliser activities. This solymucleotide is a full langth human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on

Determination of this BAC-end sequence was carried out as part of Determination with the Berkeley Diroscophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Dirosophila The BDGP is constructing a physical map of the Drosophila please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Razutoyo Goscegawa and melanogaster BAC library was prepared by Razutoyo Goscegawa and melanogaster BAC library was prepared by Razutoyo Goscegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, isogenic strain v2; cn bw sp, the same strain used for the BDGP's isogenic strain v2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or and how to order individual BAC clones, the entire library, or found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a petermination of this BAC-end sequence was carried out as part of a petermination of this BAC-end sequence project (BDGP).

Collaboration with the Berkeley Drosophila Gromer constructing a physical map of the Drosophila please see http://www.fruitfly.org The BDGP Drosophila please see http://www.fruitfly.org The BDGP Drosophila Drosophila melanogaster BAC library was prepared by Kazutoyo Osocgawa and melanogaster BAC library was prepared by Kazutoyo Osocgawa and Anyr The library is named RPCI-99 and was constructed by patrial NY. The library is named RPCI-99 and was constructed by patrial CORI digestion of Drosophila DNA provided by the BDGP from the BCORI digestion of Drosophila DNA provided by the BDGP from the BCORI digestion of Drosophila DNA provided by the BDGP from the BCORI digestion of Drosophila DNA provided by the BDGP from the BCORI digestion of corder individual BAC clones, the entire library, or and how to order individual BAC clones, the entire library, or found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1101 bp DNA linear GSS 03-JUN-1999
Drosophila melanogaster genome survey sequence TET3 end of BAC #
BACROIM22 of RPCI-98 library from Drosophila melanogaster (fruit
fly), genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     421

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Geoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CNS0039G 1101 bp DNA linear GSS 03-JUN-1999

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Droscophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - . This Droscophila malanogaster BAC library (Dros BAC) was made by Alain Billaud at CBFH (Centre d'Ettude du Polymorphisme Humain) with funding provided by a MRC paroject grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial NY. The library is named RPCI-98 and was constructed by partial in EcoRI digestion of Drosophila DNA provided by the BDGP from the Engentic strain y2. On bw sp, the same strain used for the BDGP's in and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.ut - . This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        182 ATGTTAGGGTGAAAGTTACTACTCAACTCTGTAGGTTAAAAGGAAACGTTGAGAATCTT 241

NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Esogenic strain y2; cn bw sp, the same strain used for the BDGP sp and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
